PROFESSIONAL SUMMARY

Entry-level professional with hands-on experience supporting cloud infrastructure and Oracle database environments on Linux systems through internship and practical project work. Comfortable working with application environments, database operations, and configuration issues, with a strong interest in cloud engineering and infrastructure roles.

SKILLS

Programming Languages: Python, SQL (MySQL)

Cloud & DevOps: AWS (EC2, VPC, IAM, Security Groups, RDS, Amplify), OCI (Compute, Monitoring), Docker, Terraform, GitHub Actions

Database: Oracle 19c, Oracle 23ai, RMAN (Basics), User Management

Networking: TCP/IP, IP Addressing, Subnetting, DNS, VPC Networking, Security Groups

Version Control & Tools: Git, GitHub, SSH, WinSCP, PuTTY

Operating Systems: Linux (Ubuntu, Amazon Linux), Windows

PROFESSIONAL EXPERIENCE

Cloud Infrastructure Intern - Doyensys Pvt Ltd

- Performed L1 support by monitoring emails, handling tickets, and escalating critical issues in a production environment.
- Worked with Oracle Database 19c and 23ai environments, supporting instance startup, access, and basic administration tasks.
- Learned and assisted in RMAN backup concepts and operations including monitoring and validation of scheduled backups.
- Managed user access and performed daily health checks while monitoring systems using Oracle Cloud Infrastructure (OCI).

TRAINING EXPERIENCE

AWS re/Start - TNSDC & Cultus Education

- Completed structured training focused on AWS cloud fundamentals and services through regular hands-on lab sessions.
- Learned Linux and basic shell scripting while deploying, accessing, and managing EC2 instances.
- Practiced Python and SQL fundamentals through curriculum-based exercises supporting basic scripting and queries.

CERTIFICATIONS

- AWS Certified Cloud Practitioner (CLF-C02)
- SQL Mastery with MySQL - LearnZ Development Hub

PROJECTS

DevOps Full-Stack Deployment Project (AWS, Docker, CI/CD)

- Deployed a React (Vite) + Django application on AWS EC2 using Docker, Docker Compose, Nginx, and Unicorn with multi-stage builds and environment-based configuration.
- Implemented CI/CD using GitHub Actions and provisioned infrastructure using Terraform (IaC), enabling automated builds, validation, and reproducible cloud deployment.
- Diagnosed and resolved deployment issues including Docker Compose ContainerConfig failures, frontend build errors due to Node/TypeScript mismatch, and backend API routing misconfiguration in Nginx.

Cloud-Based E-Learning Platform (Three-Tier Architecture)

- Designed and implemented a three-tier web application architecture by separating the presentation layer, application logic, and database layer for better structure and scalability.
- Deployed the application layer on AWS EC2 (Linux) to handle backend processing and manage communication between the frontend and the database.
- Configured Amazon RDS (MySQL) as the data layer, with controlled network access so that only the application server could connect to the database.

EDUCATION

B.E. Agricultural Engineering

SRM Valliammai Engineering College
